Protect business productivity applications with Cloudfinder for Google Apps

Data loss happens, even in the cloud. But can your organization afford to lose emails and work documents?

Google Apps is the up-and-coming productivity suite for businesses. Unfortunately, user error, accidental deletion or malicious employees can pose serious risks to emails and work documents. The cost to organizations that experience data loss varies depending on industries – but in all cases it is significant.

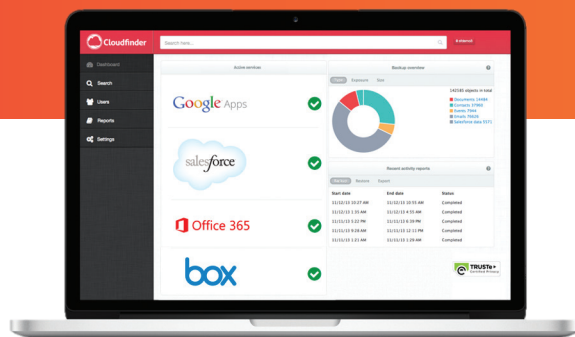

Eliminating user error and other causes of data loss is unlikely. However, it is possible to minimize its cost and disruption to the organization.

Cloudfinder for Google Apps ensures that the data used in an organization's instance of Google Apps is backed up, restorable, and protected.

Cloudfinder for Google Apps can be used to perform backups on Google Apps emails, files, folders, attachments, and metadata. Organizations that deploy Cloudfinder for Google Apps can rest assured that all of their critical Google Apps data is backed up to an encrypted, tamper-proof SafeHaven®.

With Cloudfinder, all of your Google Apps data is a click away. Administrators can instantly search Google Apps data with rich filtering and select the data to restore. In addition, detailed dashboards, reports, and monitoring of all backup activities demonstrate how Cloudfinder is working to protect your Google Apps data.

Finally, the Cloudfinder platform significantly reduces the burden placed on administrators by supporting today's most popular SaaS applications, including Office 365, Google Apps, Salesforce, and Box. From a single interface, administrators can perform cross-service instant full-text searches and point-in-time restores, making data easy to find and recover.

KEY FEATURES

- > Automated backup of Google Apps data with SafeHaven® storage, providing total data protection
- > Specific and mass restores of data into Google Apps application and local downloads, empowering administrators
- > Instant full-text search and rich search filtering, ensuring data accessibility
- > Comprehensive overview of Google Apps data backup reducing administrative burden
- > Military-grade encryption, exceeding industry standards

Google™ Apps
